PRIMO® XXM

Standard Seat with Mechanical Suspension
TECHNICAL DATA
PRIMO® XXM

The Primo XXM has an easy-to-use lever for optimally setting the suspension to the driver's weight within the range between 45 and 170 kg. Especially when a vehicle is used by multiple drivers, it's important for unpracticed users to be able to quickly and intuitively perform this important setting. The extra-high backrest, in conjunction with a lumbar support, bolsters the back and ensures an even more comfortable ride.

Measurements (installation dimensions)

- All dimensions in mm.
- Subject to technical changes.
